### AMENDMENTS TO THE CLAIMS

#### Complete Listing of Claims

1. (Original) Garment consisting of seamless circular-knit cotton or circular-knit polyamide (microfiber yarn) with a component of elastane, whereby the garment is provided with zones of variable elasticity (1-5), characterized in that compression zones of higher elasticity (4, 5), which are providing greater support, are knitted into the garment.

2. (Original) Garment according to claim 1, in particular for the torso or upper part of the body, such as a bustier bra, top, T-shirt, body wrap, body suit, bathing suit or the like, consisting of seamless circular-knit cotton or circular-knit polyamide (microfiber yarn) with a component of elastane, whereby the garment is provided with zones of variable elasticity (1 – 5), whereby zones of greater elasticity (4, 5), which therefore provide greater support, are knitted into the garment. characterized in that two lamellar supporting compression zones of higher compression (3) extend crosswise over the back.

3. (Original) Garment according to claim 2, characterized in that in a women's garment, an additional lamellar compression zone extends below the breast, lifting and shaping it.

4. (Original) Garment according to claim 3, characterized in that the lamellar compression zone under the breast merges into the lower ends of the crosswise compression zones in the back.

5. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
an additional lamellar compression zone is arranged circumferentially around the  
body at the level of the cervical spine and/or the lumbar spine.

6. (Original) Garment according to claim 5,  
characterized in that  
the compression zone for the abdominal region extends between the lamellar  
compression zone in the region of the lumbar spine and the lamellar compression  
zone which is provided below the breast to lift it.

7. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
zones of variable transparency and support effect are provided.

8. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
information such as the size, the material composition and/or laundry instructions are  
knitted into the material.

9. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
it is provided with soft, wide, non-incisive trim sections.

10. (Currently Amended) Garment according to [[one of the preceding  
claims]] claim 1,

characterized in that  
it is provided with a yarn of antibacterial effect.

11. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
it is breathable, sweat-absorbing and/or quick-drying.

12. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
it is provided with micromassage naps.

13. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
it is bi-elastic and form-fitting.

14. (Original) Garment according to claim 1, particularly for the lower body, such as panties, G-strings, hot pants, underpants, leggings, panty hose, corset belt or the like, made of seamless circular-knit cotton or polyamide yarn (microfiber yarn) with a component of elastane and an optional component of silver yarn, whereby the garment is provided with zones of variable compression strengths, whereby functional zones of higher compression, which therefore provide greater support, are knitted into the garment, whereby such compression zones are arranged in the abdominal, buttock, pelvic, waist and/or thigh regions, which can provide the problem zones with a slender shape,  
characterized in that  
at least in part several zones and/or support tapes of variable compression strength are gradually joining each other.

15. (Original) Garment according to claim 14,  
characterized in that  
the buttock areas are at least partly surrounded by such supporting compression  
zones, while they themselves represent zones of lower compression, thus allowing  
the buttock areas to be modeled.

16. (Original) Garment according to claim 15,  
characterized in that  
the buttock areas are completely surrounded by such supporting compression zones.

17. (Currently Amended) Garment according to claim 15 [[or 16]],  
characterized in that  
the zones of low compression in the buttock areas can be of transparent design.

18. (Original) Garment according to claim 14,  
characterized in that  
a circular-knit corset belt is provided with strips of higher compression which are at  
least partly diamond-shaped,  
which in the abdominal and/or buttock region border on zones of lower compression,  
and  
that they enclose zones of medium compression in the pelvic zone.

19. (Currently Amended) Garment according to [[one of claims 14-18]] claim  
14,  
characterized in that  
it is provided with a yarn of antibacterial effect, whereby it can be fitted with  
antibacterial silver yarn in the armpit and instep regions.

20. (Currently Amended) Garment according to [[one of the preceding  
claims]] claim 1,  
characterized in that

it is provided with fishnet-like ventilation zones which can also be used as pockets.

21. (Currently Amended) Garment according to [[one of the preceding claims]] claim 1,  
characterized in that  
the inside of the pockets are fitted with electrosmog-repellant yarn.
